Exercise 8.3 (Small 3/2 points)

With Java:

Build an application, which displays the current week number and adds an icon into System Tray.

Closing the window should hide the window, not close the application. The System Tray popup should have options "show" and "exit" to display the hidden window and to close the program.

PS. Week number can be found using `Calendar.getInstance().get(Calendar.WEEK_OF_YEAR)`

With React:

Create an application which consists of Toolbar and a collection of items displaying information of people. You can use earlier solutions/examples to generate for code which generates these people.

The toolbar should enable the user to adjust display to have small items with no details or larger items with details. In addition, the toolbar should allow the user to choose, how the person collection is sorted for display and to generate a new set of people.
